

# ViewPoint™ EVO

## helmet headlight mount

Mount the ViewPoint™ EVO Helmet light to your helmet as shown in Figure 1. The helmet bracket is secured to your helmet with a hook and loop strap that feeds through the helmet's ventilation holes.

1. Center the bracket (A) on the helmet, approximately a third of the way between the front and back of the helmet.
2. Feed the hook and loop strap (B) down through a vent hole next to the bracket, and then up through a vent hole on the other side of the bracket. Loop the strap through the "D" ring, feed it back through the vent hole and pull snugly to secure the bracket. Once the strap is tight and the bracket is secure, fasten the hook and loop strap.
3. Secure the power switch (C) and wire harness (E) to the helmet using the hook and loop straps (D, F) as shown in Figure 1.
4. Attach the light housing (G) to the helmet bracket. Align the bracket on the underside of the light housing with the helmet bracket, and slide the light onto the bracket from back to front. You should hear an audible 'CLICK' indicating that the light is securely attached to the bracket.
5. Adjust light angle as desired by grasping the light housing (MAKE SURE IT IS NOT HOT TO THE TOUCH) and rotating up or down and side to side. Adjust the rotation tension using the Phillips screw on the underside of the light housing bracket.
6. To remove the light from the helmet bracket, push the release tab (H) at the rear of the light housing upward, and slide the light rearward until it is free from the helmet bracket.
7. Insert the 90° plug from the wire harness into the power jack at the rear of the light housing. Connect the remaining cord from the wire harness to the battery cord.
8. To operate: Press the power switch (C) to turn on the light. Press and hold the power switch for 1.5 seconds to turn off the light.
