PERFORMANCE
FOR PEOPLE WHO LOVE BIKES™

suspension pump

- Maximum pressure 300psi
- Micro adjust bleed valve for precise inflation
- No leak head minimizes pressure loss
- Flexible metallic braid hose negotiates tight angles
- Durable aluminum barrel and positive grip handle

Using the Hurricane Aftershock

1. Thread the pump head (A) onto the shock valve and tighten the valve knob (C) completely.
2. Inflate shock to desired pressure, and if necessary use the micro adjust bleed valve (B) to reduce pressure by 2-3 psi with each press.
3. Once the desired pressure is attained, back out the valve knob (C) 2-3 complete turns. This will release the pin in the shock valve. You may hear a burst of air escape while unthreading the pin. This air is escaping from the hose, not from the shock.
4. Unthread the pump head from the shock valve.
