- 50+ hour run time on Flash mode
- Batteries included

Road End Plug Lights

viewpoint FLASHBACK

Installation:

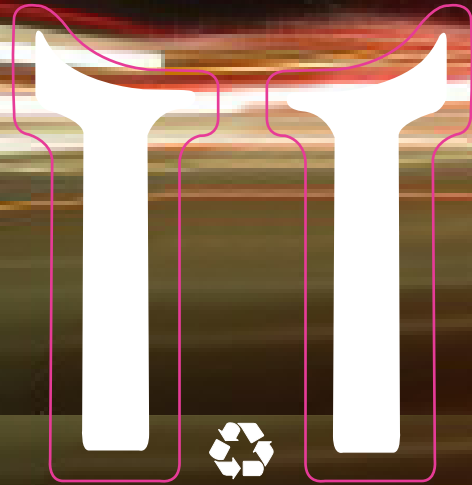

1. Remove the plastic insulator tabs from each light - simply pull tab to remove.
2. Remove existing bar plugs from your handlebar.
3. Press the Flashback lights into the ends of the handlebar, until each light is securely in place. Folding a small amount of handlebar tape into the ends of the bar will help ensure a snug fit.
4. Orient each light with the small clear window facing up.

Operation:

1. The clear lens operates as a three way switch. Press the lens to cycle through the three light modes: (A) Steady, (B) Flashing, (C) Off.

Battery Replacement:

1. The Flashback Road Bar End Lights use LR44 or 357A batteries.
2. Remove the Flashback lights from the handlebar.
3. Gently slide the old batteries out of the battery brackets and dispose of properly.
4. Slide the new batteries in place, with the negative pole of each battery facing the green circuit board.
